INSTALLATION SERVICES

Center installation services – only the best from Brunswick.

Who knows more about bowling than Brunswick? Not only do we design and manufacture the best bowling equipment in the world, we also provide the most complete services in the industry, from installation to field engineering, to on-site and classroom training. Brunswick provides the best team of experts for installing equipment in your bowling center. Plus, when you purchase scoring and management systems from Brunswick, we send world-class training experts to train your managers and employees.

Because Brunswick professionals know the equipment and systems inside and out, they will give your project the best care available.

Installation done right.

Through years of experience and knowledge of installing Brunswick products, the Brunswick Installation Services staff has the expertise to install Capital Equipment products such as lanes, pinsetters and automatic scoring. They are trained and certified by Brunswick to install equipment quickly, efficiently and in accordance with Brunswick's specifications. Our Installation experts take pride in their work and care about your success as a valued customer. Frequently, our installers are requested by name to come back and install a center's next modernization project.

To staff the job with the people that know how to get the job done right the first time, Brunswick also employs skilled members of your local Millwright and Carpenters Union. Brunswick Installation Services will provide you with the best people needed for a successful installation.

Systems engineering checked and verified.

After installation, trained and certified Brunswick Field Engineers will make the necessary adjustments and system checks to make sure your new automatic scoring equipment is operating properly. While on-site, the Field Engineer also performs a power audit of the dedicated scoring power system to ensure that your electrician has provided you with a clean and safe power system.

Training for total knowledge of center operation.

Brunswick provides an on-site trainer to teach you and your staff all the features and functions of the scoring and management systems. The trainer will work with you to integrate the scoring and management system into the current business model. The trainer will also coordinate a customized training schedule that accommodates your center's activities and staff.

Off-site maintenance training.

Brunswick periodically offers formal training sessions for center mechanics and technicians at the Brunswick Training Center in Muskegon, Michigan. We offer a nine-day maintenance class for the GS® series of pinsetters and a 5-day maintenance class for the scoring and associated center network systems.

The off-site training sessions are designed to give your maintenance staff an in-depth understanding of proper methods of operation, appropriate maintenance and troubleshooting techniques, along with a comprehensive study of the theory of operation. Training also includes hands-on experience with the equipment you have purchased.

BRUNSWICK INSTALLATION SERVICES
